Hi Kailash,

I am scheduling this live coding exercise with George West, Architect. Below are the details, along with the necessary attachment, which I will be sending the attachment 24 hours before your coding test – let us know if you have any questions.

Thank you very much and enjoy your meeting.

We will be asking you to live code a simple application on Microsoft Teams while talking through your logic and thought process. We don't expect you to complete the challenge within the hour. The goal of this tech challenge is to see how well-versed you are in the tools and languages you use. Likewise, we are looking to see how you think and approach problems and to get a sense of how resourceful you are. Below is more information about the challenge. Please let us know if you have any questions beforehand.

The Challenge

- Using the tools and languages of your choice, create a simple book catalog.
 - Sample JSON with books is provided in the **attached file**. You can use it as a starting point.
 - We do not require that the application connect to a database for this exercise (it might be a nice-to-have if there is enough time left on the call at the end).
 - Our Full Stack Developers work with a C#/.Net/Node.js backend environment, so keep that in mind and incorporate C#/.NET into your solution.
- The application should allow a user to:
 - View all available books in the catalog on a webpage.
 - Sort books by title and publish date.
 - Search books by title, author and description.
 - Add review for each book.
 - If you have time to add additional features, feel free to explain and show us.
